

SECTION 4.6: LIMITS AT INFINITY AND ASYMPTOTES (and sophisticated graphing)

1. Limits at Infinity: In plain English, what should the symbols below mean?

$$\lim_{x \rightarrow \infty} f(x) = L$$

$$\lim_{x \rightarrow -\infty} f(x) = L$$

2. Three Principles (a is a constant) and a Strategy

- If a is a constant, then $\lim_{x \rightarrow \pm\infty} ax =$
- $\lim_{x \rightarrow \pm\infty} \frac{1}{x} =$
- If $\lim_{x \rightarrow \pm\infty} f(x) = a$ and $\lim_{x \rightarrow \pm\infty} g(x) = \pm\infty$, then $\lim_{x \rightarrow \pm\infty} \frac{f(x)}{g(x)} =$
- Strategy: Divide numerator and denominator by the highest power of x in the denominator.

3. Use the Principles to evaluate the limits below. Then, use your calculator to confirm your answer is correct.

(a) $\lim_{x \rightarrow \infty} \frac{2x^2 - x}{3x - 5x^2}$

(b) $\lim_{x \rightarrow \infty} \frac{2x^3 - x}{3x - 5x^2}$

(c) $\lim_{x \rightarrow \infty} \frac{3x + \sin(x)}{x}$

(d) $\lim_{x \rightarrow -\infty} \frac{2x + 1}{\sqrt{x^2 + 1}}$ (Pay attention to the sign here!)

4. Fill in the blanks.

- If $\lim_{x \rightarrow \infty} f(x) = L$, then _____ is an asymptote of the graph of $f(x)$.
- If $\lim_{x \rightarrow -\infty} f(x) = L$, then _____ is an asymptote of the graph of $f(x)$.

5. Sketch a graph of a function $g(x)$ that satisfies all of the conditions below:

- it's continuous on $(-\infty, \infty)$
- it has an absolute maximum of 3 at $x = 0$
- $\lim_{x \rightarrow \infty} g(x) = -5$
- $\lim_{x \rightarrow -\infty} g(x) = 0$.

6. Given $f(x) = \frac{x^2}{x^2+1}$, $f'(x) = \frac{2x}{(x^2+1)^2}$, $f''(x) = \frac{-2(3x^2-1)}{(x^2+1)^3}$. Identify important features of $f(x)$ like: domain, asymptotes, local extrema, inflection points, and make a rough sketch.
